This Office action supersedes the previous communication.

Claims 1-8 are pending.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kizaki et al., EP 1 024 139 A1 in view of Naik et al., Am. Inst. Chem. Eng. J. (1984), Vol 44(3), pages 612-646.

Applicant claims a process of making compounds of formula I comprising reacting compounds of formulae 2 and 4 in the presence of compound of formula 3, a phosphonium phase transfer catalyst.

Determination of the scope and content of the prior art (MPEP §2141.01)

Kizaki et al., teach a similar process using ammonium phase transfer catalyst.

Ascertainment of the difference between the prior art and the claims (MPEP §2141.02)

The difference between the instant invention and that of the Kizaki is that Applicant use phosphonium catalyst instead ammonium by Kizaki et al.

Finding of prima facie obviousness—rational and motivation (MPEP §2142.2413)

However, Naik et al., teach that both catalysts are well known in the art and are commonly use as phase transfer catalyst. Therefore, the instant invention is prima facie obvious from the teachings of Kizaki et al., and Naik et al. One of ordinary skill in the art would have

Art Unit: 1625

known to substitute phosphonium catalyst for ammonium catalyst at the time the invention was made. The motivation is from the teaching of Naik et al.
